

DESCRIPTION: الموصفات

The **GENSTAR** is an auto start generator controller that can control one generator. It includes a large LCD display, 5 control push buttons, 10 indicator LEDs. It displays all information needed to analyze the system. It monitors internal protections and external fault inputs. It can display all current and voltage measurements for the main power.

تستخدم Genstar للتحكم بالمولاد. تشمل شاشة كبيرة، خمس كبسات للتحكم وعشر مؤشرات ديدنات صوتية. تعرض كل المعلومات للتحكم بالمولاد وتعرض الخطأ. تعرض أيضاً قياسات الأمبير والفولتاج.

New hardware
and software
design

GENERAL FEATURES:

- ❖ Complete instrumentation display for the generator
- ❖ Automatic or manual start possibility
- ❖ Plug-in terminal
- ❖ Complete documents for the installation & setup
- ❖ Temperature and oil pressure sender selected
- ❖ Large LCD display with backlight, functional at -30°C
- ❖ Operating temperature from -20°C to 70°C
- ❖ 5 programmable digital [contact] inputs
- ❖ 5 analog inputs for pressure, temperature, coolant, dynamo and fuel level monitoring
- ❖ 5 programmable outputs
- ❖ Predefined sender models or manual configuration allowed
- ❖ Information on status, alarms and events
- ❖ Transistor short circuit protected outputs.
- ❖ Three phase current control range: 0 – 5A (CT input)
- ❖ 2 Programmable outputs *
- ❖ Energize to stop
- ❖ Selectable protections alarm/shutdown
- ❖ RMS voltage and frequency measurement

2000 error logs

- ❖ Individual Phase Information
- ❖ Generator voltage: 75-300 V-AC (Ph-N)
- ❖ Generator frequency: 10-100Hz
- ❖ DC supply range: 6.0 to 33.0 V-DC.
- ❖ Starter dropouts: 0V for 100ms
- ❖ 2000 errors log.
- ❖ Standby current : ~ 80mA
- ❖ Charge excitation current: 54mA @ 12V-DC
- ❖ Storage temp.: -30°C (-22°F) to 80°C (176°F)
- ❖ Maximum humidity: 95% non-condensing
- ❖ Dimensions: 5.6 x 7.4 (LxW inch), 142.2 x 188 (LxW mm)
- ❖ Panel cut-out dimensions: 6 x 8.2 (LxW inch), 152.4 x 208(LxW mm)
- ❖ Oil hour counter flashing when oil hours expired.
- ❖ Over Current alarm.
- ❖ Over / Under Voltage alarm and shut down
- ❖ Over/ Under frequency alarm and shutdown.
- ❖ Oil Reset Password.
- ❖ Custom Features available.
- ❖ Main Password protection.

DIGITAL INPUTS

The unit has 5 configurable digital inputs

- (11) Remote start enable
- (12) Oil switch
- (10) Fault1
- (9) Temp switch
- (13) Fault2

ANALOG INPUTS

5 analog inputs are provided for the following functions:

- (6) Engine/water temperature
- (7) Oil pressure
- (15) Fuel level
- (14) Coolant
- (8) Dynamo

OUTPUTS

The unit provides 5 programmable short-circuit protected

Outputs for controlling the generator set and alarm information:

- (3) Starter
- (7) Valve
- (4) Load contractor
- (5) Programmable: General alarm or Spare *
- (6) Programmable: General alarm or Spare*

* Spare: pump fuel, alarm2, engine-heater and excitation valve

REMOTE PROGRAMMING AND CONTROL

The unit can be connected to a PC using RS485 serial Ports.

INDICATOR LED's

: Run

: Over volt / under volt

: Fault 1, 2

: Water

: Battery/ dynamo

: Oil

: Temperature

: Frequency

- If coolant is not used then it must be connected to 0 V or disable by P25.
- To reset oil hour counter, you must press Enter & Menu buttons at the Same time then release, or you can reset by setting P01=P34

INSTRUMENTATION

Ac metering:

- Voltage 3-phase (L-L & L-N)
- Current per phase
- Frequency

DC metering:

- Battery volts
- Engine hours run
- Oil hour meter
- Engine temperature (in °C)
- Oil pressure (PSI), (Bar)

PROTECTION & SHUT DOWN

- Battery voltage (alarm & shut down)
- Under / over volts (alarm & shut down)
- Under / over frequency (alarm & shut down)
- Over / under current (alarm & shut down)
- Over / under volt (dynamo, alarm, & shutdown)
- Overload (alarm & shut down)
- Low/high oil pressure (alarm & shut down)
- high engine temperature (alarm & shut down)
- AUX Fault1(alarm and shut down)
- Low fuel level (alarm and shutdown)
- Coolant level (alarm and shutdown)
- Aux Fault2 (alarm & shut down)

DISPLAYING INSTRUMENTATION

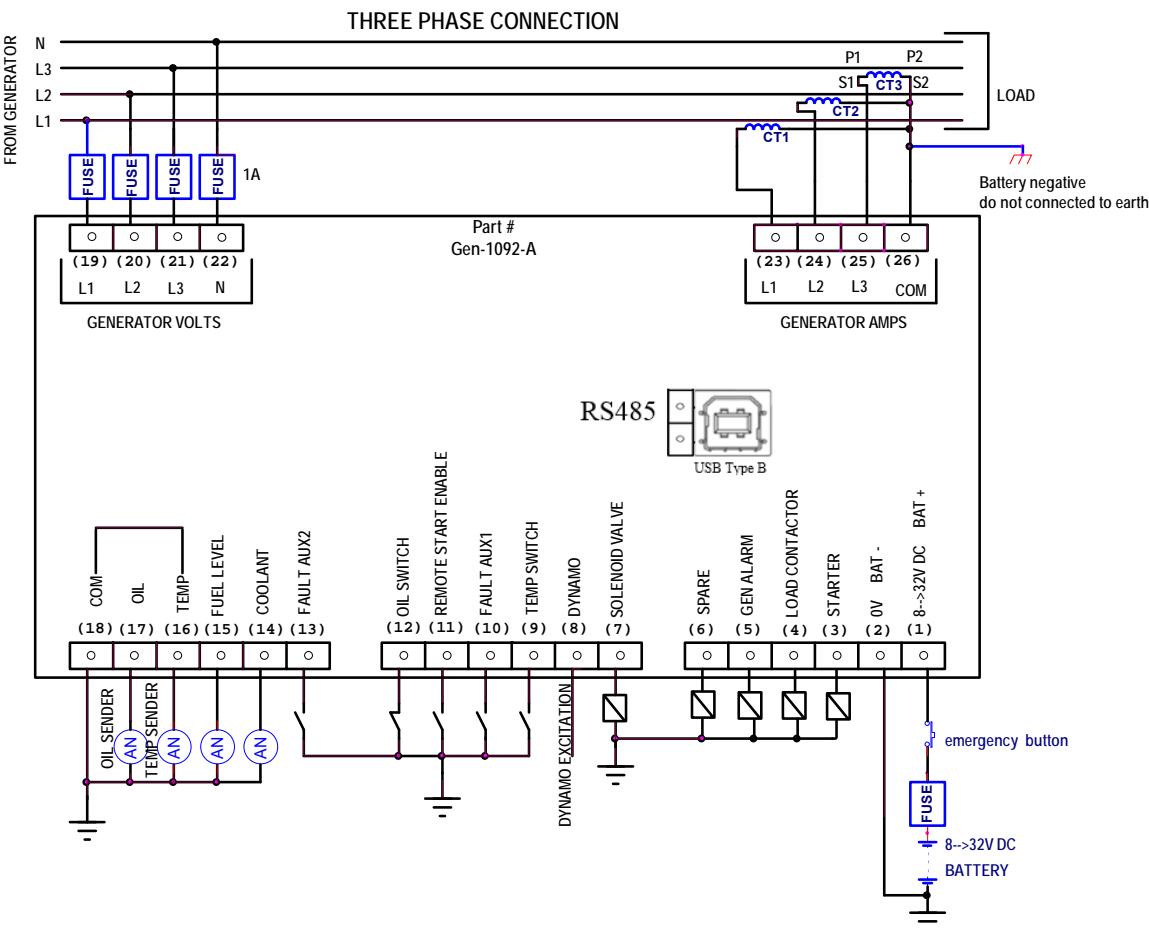

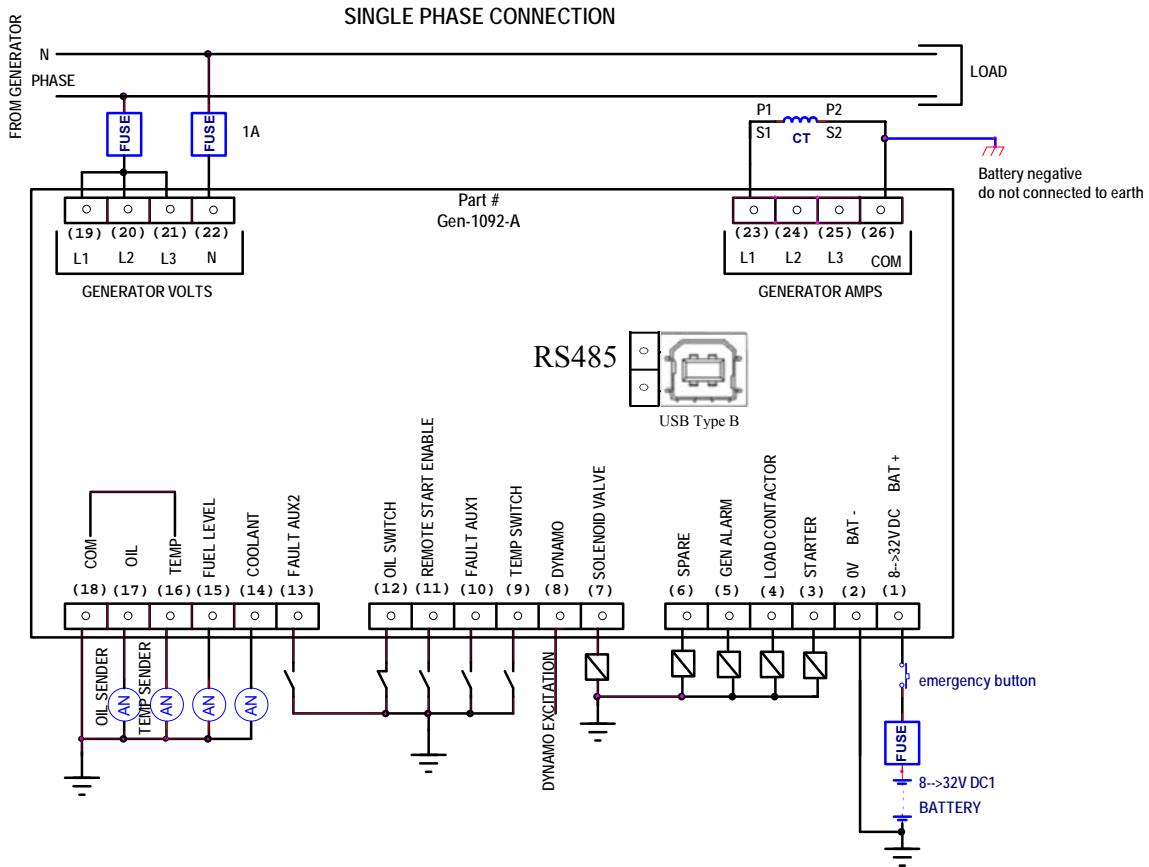

All 4 pages display:

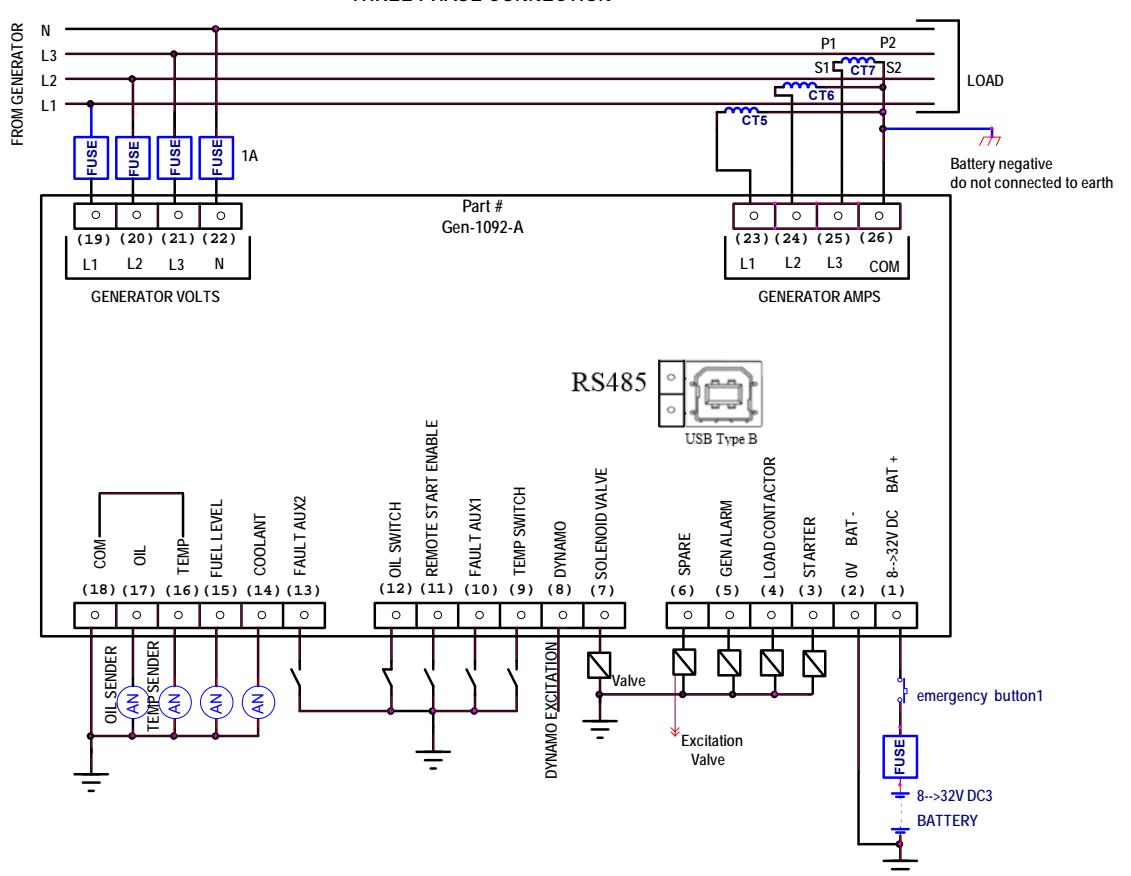

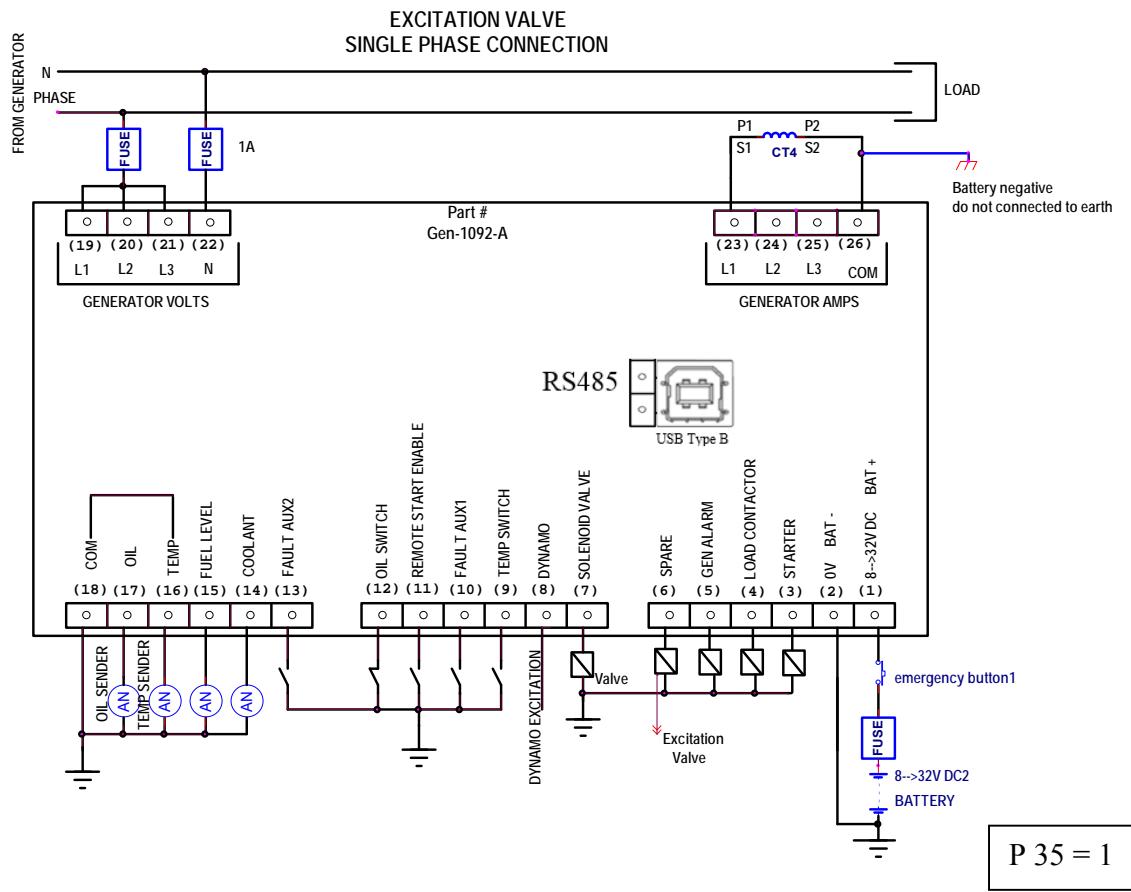

- The oil pressure in PSI, Bar
- The engine temperature in °C
- The DC voltage
- The oil hours
- The engine hour

In addition:

1. Page 1 displays the 3-phase voltages in V: L1-N, L2-N and L3-N
2. Page 2 displays the 3 phase currents in A: L1-N, L2-N and L3-N.
3. Page 3 displays the phase 1 voltage L1-N (V), the phase 2 current L2 – N (A) & the frequency (Hz).
4. Page 4 displays the composed 3-phase voltages: L1- L2- L2-L3 and L3- L1 (V).

To go to the next page, click on the Menu key

ACCESSING THE PARAMETER MENU

- To access the pages menu, click on the **MENU** button for 5 secs.
- First Page that appears is Parameters Page “**PRU**”
- Click **Arrow Up**, on AUTO button to go to Error Page “**Err**”
- Click **Arrow Up** button Again to go to LOGS page “**Log**”
- Click **Arrow Up** again to see the Firmware version page. “**Ver**”
- To select and enter a page click the **Select button**, above Menu button.
- To change a parameter, go to parameter page and press **SELECT**, then enter the required password by scrolling through the numbers using **arrow up and down** buttons (Auto and M Buttons)
 - Once you chose the correct password click **Select** to save password.
 - Password to be entered only once. Click on **Arrow Up** to reach the parameter you desire to change, then click **SELECT** to change the parameter Value. It will start blinking, indicating being ready to accept new value. Scroll by arrow up or down key to reach desired value, then click **SELECT** to save the value.
 - To exit parameters page and go to main menu click on **MENU**.
 - To exit any page and go to main menu Click on **MENU**
- Click on **MENU** for 5 seconds to Leave main menu and go to main screen

Param	Description	units	Default values	Range
